FullArmor Granted Patent for Resource Access System and Method by the United States Patent and Trademark Office (USPTO)

Patented Technology Enables an External Endpoint to Perform Resource Operations on an Internal Resource without the need of a Virtual Private Network (VPN)

BOSTON, September 12, 2017 -- FullArmor, a leading provider of Cloud security and management tools, today announced that it has been granted patent number 9,762,563 for "Resource Access System and Method."

FullArmor's HAPI (Hybrid API) product incorporates a system for enabling an external endpoint to perform resource operations on an internal resource controlled by a directory service such as Microsoft Active Directory. The system is comprised of a gatekeeper which resides in the cloud and a gateway which resides internally. The gatekeeper and gateway securely communicate to handle resource operations, directory authentication, and authorization of the requested resource. A resource may include user identity, internal files, databases, applications, printers, and other related resources.

Seamless, Secure Connection to the Enterprise

The FullArmor HAPI Platform provides an extensive set of APIs that enables developers, enterprise DevOps, and System Integrators a secure platform to:

- Enhance Cloud and mobile apps with the capability for users to login to on-premise Active Directory instances
- Make it possible for Cloud and mobile apps to directly query and provision/deprovision AD user/group information without the security concerns and latency associated with duplication and syncing
- Eliminate the need to rely on VPNs or third party Identity providers to connect to on-premise AD infrastructures. The HAPI Gateway serves as a secure, dynamic and scalable identity/authentication/access provider
- Support hybrid access to both Active Directory and Cloud directory resources

About FullArmor

FullArmor is a leading edge provider of security and management tools for software-as-a-service (SaaS) and Cloud technologies. Its latest offerings enable SaaS and mobile vendors to access internal Active Directory resources from the Cloud. The company is a Microsoft Gold Certified Partner. More than 5 million users and 1,500 organizations worldwide rely on technology developed by FullArmor. For more information visit us on the web at www.fullarmor.com or call 800.653.1783.
